

Security

Highlight Feature

- > Protect your data from unauthorised access and make sure that what is yours, stays yours.
- > Benefit from the state-of-the-art security features, which come standard with all new Toshiba systems.
- > Increase your data security by using a Toshiba MFP to guard the information which is most valuable to you.

Your challenge

In today's world an MFP handles more than just paper. It processes sensitive data, is part of complex digital workflows and is accessed by many people from different devices. So how do you ensure that information does not by mistake end up in the wrong hands?

Our solution

Toshiba can help your business meet the increasing security challenges of today's world. All our e-BRIDGE Next models fulfil the highest security standards to protect your data from unwanted access without compromising on the efficiency and performance of the systems.

Various features - such as the Toshiba Secure HDD, role-based access control to the systems or user authentication at the device - let you decide which information should be given to whom. Once you have set the rules, the MFP will protect your data for you.

SECURITY

Your benefits

When using all standard features offered on the Toshiba e-BRIDGE Next systems, you can be sure your business critical data is safe. Role-based access rights and built-in user authentication regulate who may retrieve or show which document.

Additionally, the hard disk drive in these models uses a complex encryption and authentication method which only allows the device it has been installed in to access the data stored on it. If removed and connected to another PC or MFP the data can not be extracted. Instead the encryption key, which is stored on the HDD itself, will be deleted. This also ensures that you can instantly and permanently delete the entire data on the HDD at the end-of-life of your system.

Every company wants their data to be safe, but for some this is business critical. Leakage of information or confidential data can result in an economical disaster.

- Protect confidential information from unwanted access.
- Ensure only authorised persons get access to your or your clients' data.
- Streamline user authentication for access to documents and device functionality.

All e-BRIDGE Next models fulfil the highest security standards without compromising on the efficiency and performance.

Protecting your data

> Document Security

- SecurePDF
- Private Print
- Secure e-Filing
- Secure Fax

> Device Security

- Secure HDD
- SSL/TLS
- IP/MAC Address Filtering
- SMB Signing
